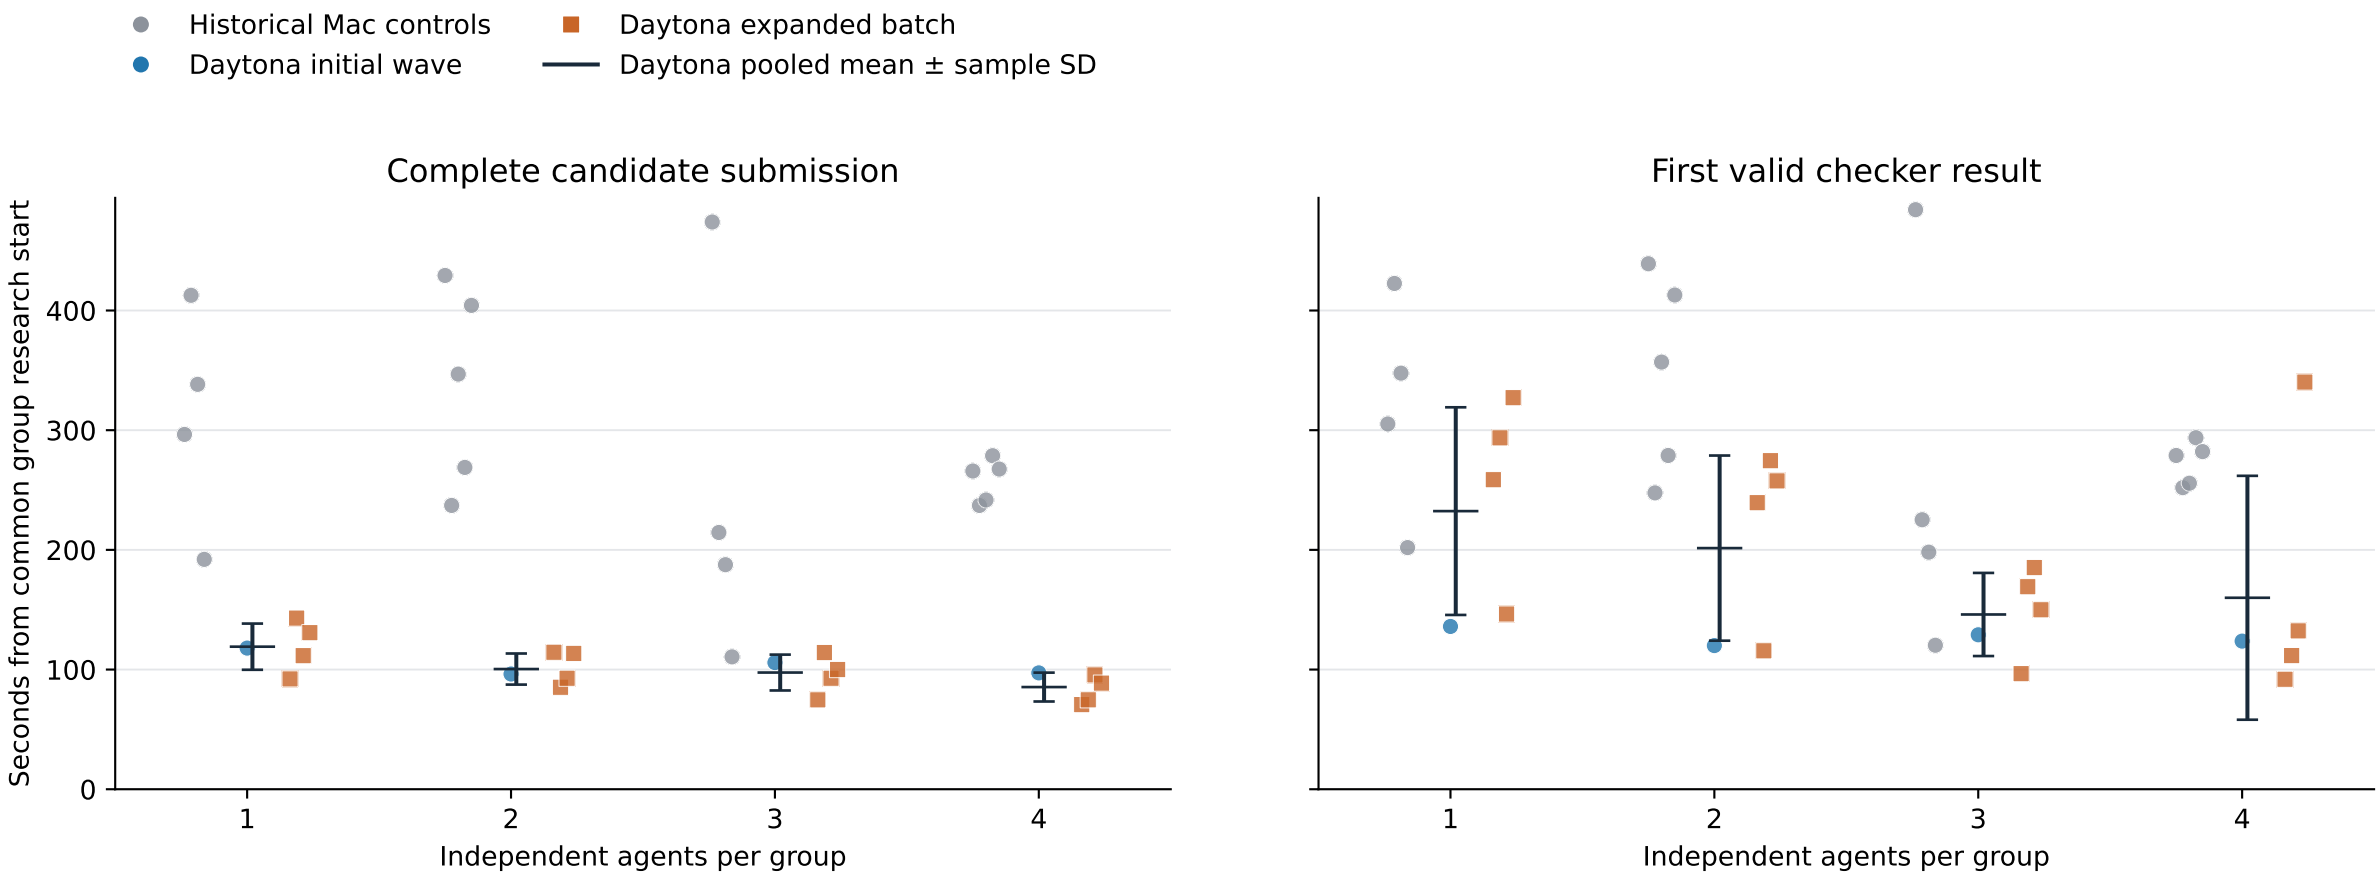
First eligible finite-word construction

Historical Mac controls and Daytona prompt-diversity arm | PROVISIONAL: final manual audit pending



Success denominators by agent count 1 / 2 / 3 / 4: Daytona 5/5 each; historical Mac 4/5, 5/5, 4/5, 5/5.

Baseline reuse is eligible; all 20 Daytona results miss the requested improvement milestones. These are submission/check latencies, not novel-discovery or multiplication-runtime measurements. Platform, account/cache, model concurrency and checker scheduling differ. Expanded batch: 16 groups / 40 workers; two shared checker slots. Queue time stays inside group clocks. Descriptive comparison only.
