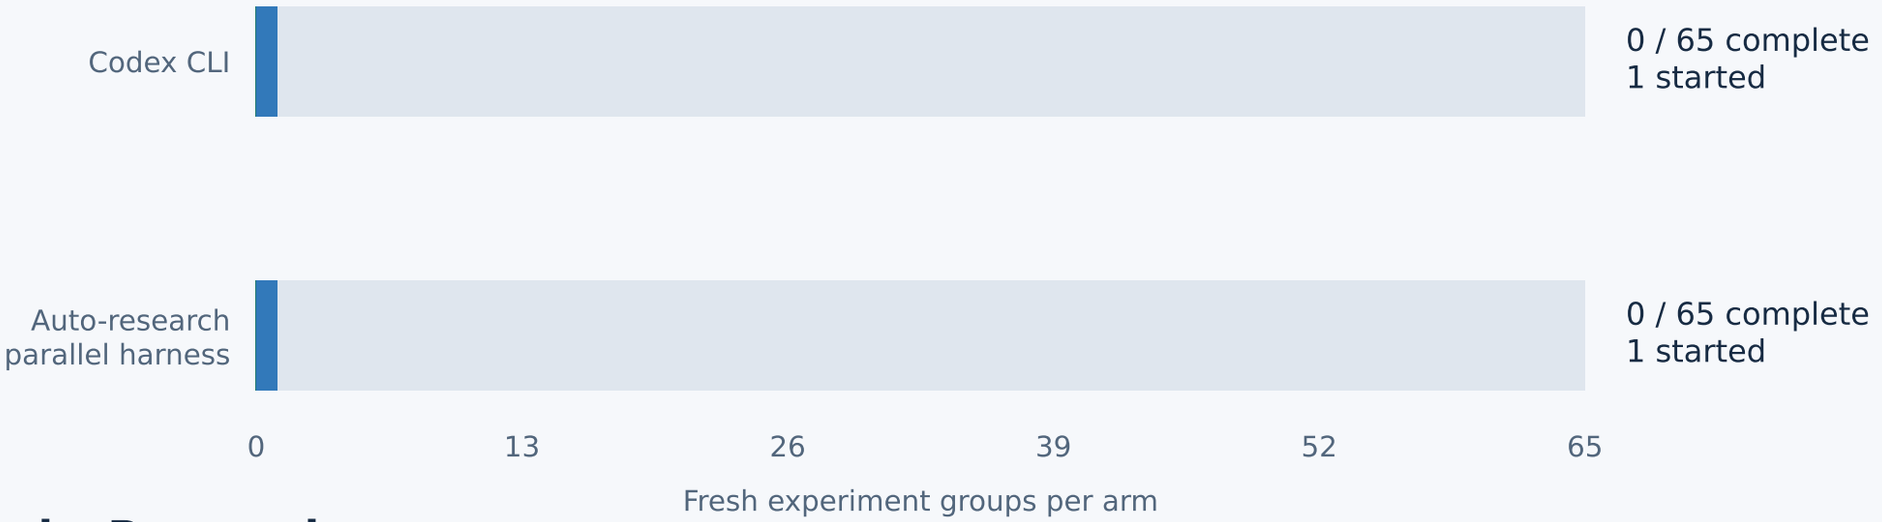
Codex CLI vs Auto-research parallel harness

Corrected experiment progress | 16 Oct 2026, 01:27 UTC

Main study



Current pair: Research

2 agents per arm | Sharing every 300 seconds

4/4 workers prepared **2/2 validators armed** **0 verified targets**

Research elapsed: 5m 58s | Candidate snapshots: CLI 0 / Auto-research 1

Success requires all three frozen milestones and independent replay; submitting the baseline does not count.
Preparation, cooldown and the two availability preflights are excluded from experiment-group counts.
Observable controls are matched; provider-side effort and final tool schemas remain unavailable.
